WCH-LinkUserManual

Version: V2.2

https://wch-ic.com

1 WCH-Link

1.1 Module Introduction

WCH-Link module can be used for online debugging and downloading of WCH RISC-V MCU, and also for online debugging and downloading of ARM MCU with SWD/JTAG interface. It also comes with a serial port for easy debugging output. There are currently 3 WCH-Links including WCH-LinkE, WCH-DAPLink, and WCH-LinkW, and WCH-LinkE is recommended.

Figure 1 WCH-Link physical diagram

Table 1 WCH-Link mode

Mode	Status LED	IDE	Support chip
RISC-V	Blue LED is always	MounRiver Studio	WCH RISC-V core chips that support single/dual
KISC-V	off when idle	wounkiver Studio	line debugging

WCH-LinkUserManual			https://wch-ic.com
ARM	Blue LED is always	Vail/Mana Diver Studie	ARM core chips that support SWD/JTAG protocol
AKM	on when idle	Ken/Mounkiver Studio	ARM core chips that support S w D/J IAG protocol

1.2 Mode Switching

Way 1: Use MounRiver Studio software to switch Link mode. (This method is applicable to WCH-Link, WCH-LinkE and WCH-LinkW)

- \odot Click arrow $red \square$ in the shortcut toolbar to bring up the project download configuration window
- © Click Query on the right side of Target Mode to view the current Link mode
- ③ Click Target Mode option box, select the target Link mode, click Apply

Operations		
		,
Target Mode:	WCH-LinkRV	V Query Apply
Memory Assign:	WCH-LinkRV WCH-DAPLink	Query Apply
Clear Code Flash:		~ Apply

Way 2: Use WCH-LinkUtility tool to switch Link mode.

- © Click Get on the right side of Active WCH-Link mode to view the current Link mode
- © Click Active WCH-Link mode option box, select the target Link mode, click Set

Connected WCH-Link List:	~	Refresh	
Active WCH-Link Mode:	WCH-LinkRV 🗸	Get	Set
Operation Result: 🗸	WCH-LinkRV WCH-LinkDAP-WINUSB WCH-LinkDAP-HID	Result Collect: Suc	c:0 Total:0 Clear

Way 3: Use ModeS key to switch Link mode. (This method is applicable to WCH-LinkE-R0-1v2, WCH-DAPLink-R0-2v0 and WCH-LinkW-R0-1v1 and above)

 \odot $\;$ Press and hold the ModeS key to power up the Link $\;$

Notes:

- (1) The blue LED flashes when downloading and debugging.
- (2) The Link maintains the switched mode for subsequent use.
- (3) WCH-Link simulation debugger module URL: <u>https://www.wch-ic.com/products/WCH-Link.html</u>
- (4) MounRiver Studio Access URL: <u>http://mounriver.com/</u>
- (5) WCH-LinkUtility Access URL: <u>https://www.wch.cn/downloads/WCH-LinkUtility_ZIP.html</u>
- (6) WCHISPTool Access URL: <u>https://www.wch.cn/downloads/WCHISPTool_Setup_exe.html</u>
- (7) WCH-Link, WCH-LinkE and WCH-LinkW support LinkRV and LinkDAP-WINUSB mode switching; WCH-DAPLink supports LinkDAP-WINUSB and LinKDAP-HID mode switching.

1.3 Serial Port Baud Rate

Table 2 WCH-Link serial	port supports baud rate
Table 2 WOII-Link Serial	port supports baud rate

1200	2400	4800	9600	14400
19200	38400	57600	115200	230400

Table 3 WCH-LinkE/DAPLink/LinkW serial port supports baud rate
--

1200	2400	4800	9600	14400	19200
38400	57600	115200	230400	460800	921600

Notes:

(1) Figure 1 in the row of pins RX and TX for the serial port transceiver pins, serial port support baud rate is shown in the table above.

(2) CDC driver needs to be installed under Win7.

(3) If you re-unplug Link, please re-open the serial debugging assistant.

Note:

(1) Among them, CH564, CH584_585 and CH32V002_004_005_006_007 support both 1-wire (SWDIO) and 2-wire (SWDIO-SWCLK) debug interfaces.

(2) WCH-Link-R1-1v1 has been discontinued and is still officially maintained, but no new features are added.

JTAG interface pin name	JTAG debug interface	Pinout		
TMS	JTAG mode selection	PA13		
ТСК	JTAG clock	PA14		
TDI	JTAG data input	PA15		
TDO	JTAG data output	PB3		

Table 7 STM32F10xxx JTAG interface pinout

Notes:

- (1) Link maximum supported line length: 30cm, if the download process is unstable, try to turn down the download speed.
- (2) JTAG mode, WCH-LinkE-R0-1v3, WCH-DAPLink-R0-2v0 hardware version began to support, the previous hardware version does not support.
- (3) WCH-LinkE high-speed version is only for CH32F20x/CH32V20x/CH32V30x to speed up.
- (4) CH569、CH579、CH573、CH583、CH59x、CH584_585, if you want to use Link for downloading or debugging, you need to use the official ISP tool to open the 2-wire debug interface, and you need to pay attention to Link mode when using it. The steps are as follows:
 - Open WCHISPStudio tool, the chip to be tested enters BOOT mode
 -CH569 needs to short HD0 and GND to power on through U-port;
 -CH573/CH583/CH59x/ CH584_585 need to press and hold the Download button to power on
 through the U-port;
 - *WCHISPStudio tool will automatically pop up the adaptation window, click to open the two-wire debug interface*

3 Keil Download and Debug

3.1 Device Switching

WCH-DAPLink supports two modes, ARM mode-WINUSB device and ARM mode-HID device, and you can switch between the two device modes with the WCH-LinkUtility tool (or by powering up the Link after long pressing the ModeS key.) WCH-Link, WCH-LinkE and WCH-LinkW only support ARM mode-WINUSB device mode.

Connected WCH-Link List:	DAP Link [#1] V	Refresh	
Active WCH-Link Mode:	WCH-LinkDAP-WINUSB ~	Get	Set
Operation Result: 🧹	WCH-LinkRV WCH-LinkDAP-WINUSB WCH-LinkDAP-HID	Result Collect: Succ	::0 Total:0 Clear

Table 8 WCH-DAPLink device

Device	Support Link	Keil supported versions	
	WCH-Link		
ADM 1. WINHICD design	WCH-LinkE	Keil V5.25 and above	
ARM mode-WINUSB device	WCH-DAPLink	ARM-CMSIS V5.3.0 and above	
	WCH-LinkW		
ARM mode-HID device	WCH-DAPLink	Supported in all versions of Keil	

Note:

- (1) WCH-Link, WCH-LinkE, WCH-DAPLink and WCH-LinkW are factory defaulted to WINUSB device mode.
- (2) WCH-DAPLink-R0-1v0 switches between two device modes by long pressing the IAP key to power up.
- (3) WCH-LinkUtility tool on will occupy the Link device and cause Keil software can not recognize the Link.

3.2 Download Configuration

Click the magic wand in the toolbar to bring up the Options for Target dialog box, click Debug and select the emulator model

• Use: CMSIS-DAP De	bugger Settings
Load Application at Sta	artup 🔽 Run to main()
Initialization File:	Edit
Parters Dahua Saasiaa	
Restore Debug Session	
Watch Windows	IV Tracepoints
Memory Display	System Viewer
re monory Display	it system viewer

- © Click the Use option box and select CMSIS-DAP Debugger
- ③ Click the Settings button to bring up the Cortex-M Target Driver Setup dialog box

Debug Trace Flash Download CMSIS-DAP - JTAG/SW Adapter WCH CMSIS-DAP Serial No: [CD288F065206 Firmware Version: [2.0.0	Pack SW Device SW DEvice Device Name SWDIO O 0x2BA01477 ARM CoreSight SW-DP	Move Up Down

<		

③ Basic debug commands

Reset: Perform a reset operation on the program.

Run: Cause the current program to start running at full speed until the program stops when it encounters a breakpoint.

B Step: Execute a single statement and if a function is encountered, it will go inside the function.

O Step Over: Execute a single statement that does not go inside the function if it encounters a function, but runs the function at full speed and jumps to the next statement.

Step Out: Run all the contents after the current function at full-speed until the function returns to the previous level.

0 Click the Debug button 0 in the toolbar again to exit debug.

4 MounRiver Studio Download and Debug

4.1 Download Configuration

- O Click the arrow end of the toolbar to bring up the project download configuration window
- © Click the Disable Read-Protect button to disable the chip read protection

③ Target configuration, the main elements are as follows.

Target		
MCU Type:	CH32V00x	~
Program Address:	0x0800000	~
CLK Speed:	High	~
Target File:	obj\ADC_DMA.hex	Browse

④ Configuration Options

Options			
🗹 Erase All	Program	🗹 Verify	Reset and run

S Click Apply and Close to save the download configuration. Click on the icon in the toolbar to burn the code, and the result will be displayed in the Console.

4.2 Debug

① Enter the debugging page

Way 1: Click the Debug button 🕚 in the toolbar to enter the debug page directly.

Way 2: Click the arrow in the toolbar and select Debug Configurations to pop up the debug configuration page. Double-click GDB OpenOCD MRS Debugging to generate the obj file, select the obj file and click the Debug button at the bottom right corner to enter the debugging page.

```

③ Basic debug commands

Keset: Perform a reset operation on the program.

Run: Make the current program start running at full speed until the program stops when it meets a breakpoint.

Terminate: Exit debugging.

Step Into: Execute a single statement, and if a function is encountered, it will go inside the function.

Step Over: Execute a single statement, and if it encounters a function, it will not go inside the function, but run the function at full speed and skip to the next statement.

Step Return: Run all contents after the current function at full speed until the function returns to the previous level.

Click button, exit the debug.

4.3 Other Functions

4.3.1 Set Chip Read-Protect

Query chip read-protect status

Enable chip read-protect status

Disable chip read-protect status

4.3.2 Code Flash Full Erase

MounRiver Studio can erase all the user areas of the chip by controlling the hardware reset pin or by repowering the chip. To control erase by re-powering, Link is required to power the chip; to control erase by hardware reset pin, the reset pins of the chip and Link need to be connected. (Supported by WCH-LinkE, WCH-DAPLink and WCH-LinkW only)

4.3.3 Disable 2-wire SDI

For chips other than CH32 series, code and data protection can be enabled by disabling the 2-wire SDI.

Disable the 2-wire SDI

4.3.4 Chip Memory Allocation

For high-capacity general-purpose (connected/interconnected/wireless) chips, memory allocation is available through MounRiver Studio; please refer to the User Selection Word section of the CH32FV2x_V3xRM manual for details.

Notes:

(1) WCH-LinkE supports manual online update, the steps are as follows.

- Power up the Link after long press the IAP button until the blue LED blinks.
- MounRiver Studio/WCH-LinkUtility will have a pop-up window to remind you when you click the download button, click Yes to start the update.
- (2) If the Link firmware update is abnormal, please update the firmware by offline update.

6.3 WCH-LinkUtility Offline Update (2-wire Approach to Offline Update)

© Connect WCH-LinkE with WCH-LinkE to be updated

WCH-LinkE	Link to be updated
3V3	3V3
GND	GND
SWDIO	SWDIO
SWCLK	SWCLK

- WCH-LinkE power on, select the Link chip model to be updated (WCH-LinkE main control chip is CH32V30x)
- ③ To be updated Link into IAP mode (long press the IAP button to power up the Link, that is, through the USB port connected to the computer to power up)
- ③ Click Target->Clear All Code Flash-By Power off to erase all the user area of the chip

7 WCH-LinkE High-speed JTAG

7.1 Module Overview

The WCH-LinkE-R0-1v3 provides a JTAG interface that supports 4-wire connections (TMS, TCK, TDI and TDO wires) for extending the JTAG interface for computers to operate CPUs, DSPs, FPGAs, CPLDs and other devices.

Figure 3 WCH-LinkE high-speed JTAG mode

7.2 Module Features

- As Host/Master host mode.
- JTAG interface provides TMS wire, TCK wire, TDI wire and TDO wire.
- Support high-speed USB data transfer.
- Flexible operation of CPU, DSP, FPGA and CPLD devices through computer API cooperation.

7.3 Module Switching

The WCH-LinkE-R0-1v3 can be upgraded to high-speed JTAG mode via the WCHLinkEJtagUpdTool tool, download the steps as follows.

- WCH-LinkE-R0-1v3 into IAP mode (long press the IAP button to power up the Link, i.e., connect to the computer through the USB port to power up), at this time the blue LED flashes.
- Open WCHLinkEJtagUpdTool tool, execute the download (WCH-LinkE high-speed JTAG upgrade firmware has been automatically added).
- ③ Firmware update is complete, at this time the blue LED is always on.

• WCH-LinkE high-speed JTAG upgrade firmware

© WCH-LinkE high-speed JTAG offline upgrade firmware

7.4 Download Process

- In WCH-LinkE high-speed JTAG mode, the Bit program file is first downloaded to the FPGA via JTAG, and the Bit file will operate the SPI controller of the FPGA to convert the JTAG data to SPI data for writing to Flash, and this step is to write the BIN file to realize its program curing process.
- Itere the FPGA is Xilinx xc7a35t. Write the CFG file and use "openoed -f" to call it. Name the CFG file as usb20jtag.cfg and save it to the location of the openoed.exe file.

Specify WCH-LinkE high-speed JTAG debugger adapter driver ch347 ch347 vid pid 0x1a86 0x55dd

Set TCK clock frequency adapter speed 10000

Specify TARGET, loading the JTAG-SPI driver in OpenOCD source [find cpld/xilinx-xc7.cfg] source [find cpld/jtagspi.cfg]

Set IR command of TARGET set XC7_JSHUTDOWN 0x0d set XC7_JPROGRAM 0x0b set XC7_JSTART 0x0c set XC7_BYPASS 0x3f

Download process
Init
First download the Bit file to TARGET
pld load 0 bscan_spi_xc7a35t.bit
reset halt
Detect Flash information
flash probe 0
Download Bin file to Flash
flash write image erase test.bin 0x0 bin

Effective firmware operation irscan xc7.tap \$XC7_JSHUTDOWN irscan xc7.tap \$XC7_JPROGRAM runtest 60000 runtest 2000 irscan xc7.tap \$XC7_BYPASS runtest 2000

exit

③ Run the command: openocd.exe -f usb20jtag.cfg in Windows terminal and execute it as follows.

D:\MounRiver\MounRiver Studio\toolchain\OpenOCD\bin>openocd.exe -f usb20jtag.cfg
Open On-Chip Debugger 0.11.0+dev-02415-gfad123a16-dirty (2022-12-13-09:38)

8 WCH-LinkW Use Instruction

8.1 Module Overview

WCH-LinkW is a wired/wireless 2.4G dual imitation real debugger, which can be used for online debugging and downloading of WCH RISC-V architecture MCU and also for online debugging and downloading of ARM chips with SWD/JTAG interface.

8.2 Use Methods

8.2.1 Wired Mode

Wired mode only needs 1 WCH-LinkW, connect the row of pins to MCU and USB port to PC for downloading and debugging.

8.2.2 Wireless Mode

Wireless mode requires 2 WCH-LinkW, divided into WCH-LinkW master (connected to computer) and WCH-LinkW slave (connected to MCU.) After WCH-LinkW is successfully enumerated to computer, it will detect whether there is a slave match within 2 seconds to switch mode, if there is a slave match, it will switch to wireless mode, and the green light will be on; otherwise, it will switch to wired mode, and the green light goes off.

Wireless mode download debugging requires the use of two WCH-LinkW, the use of the following steps:

① The slave and MCU are connected by two wires, and the power is supplied through the U-port of MCU, or the slave and MCU can be powered by charging head or mobile power connected to the USB port of the slave

⁽²⁾ After the slave is successfully powered up, the host USB port is connected to the computer. After the host device is successfully enumerated and matched to the slave within 2 seconds, the green light of the host and the slave will be lit

③ After the successful matching of wireless mode host and slave, the host and slave are powered off, then repeat the above steps, if only one is powered off, it can be re-powered for automatic matching without repeating the above process

SWCLK/TCK SWD10/TMS Slave GND Emulator 3V3 Host Emulator USB USB C C

④ Download and debug MCU

Note: Using Code Flash full erase and power output controllable function requires connecting to the slave USB port via charging head or mobile power to power the slave and MCU.

8.3 Wireless Mode Access Address Match

When WCH-LinkW uses wireless mode for downloading and debugging, it is necessary to ensure that the wireless mode access addresses of the host and slave are the same. You can set the wireless mode access address through the WCH-LinkUtility tool. The steps are as follows:

	Disable Standby-Mode RST	Enable Soft-Ctrl IWDG
DATA0: 0x FF	DATA1: 0x FF	Enable mul-func, ignored pin status within 12ms $$
RF 2.4G AccessAddr:	0x E339E339 CREATE GET S	ET

① Connect WCH-LinkW wireless mode host and slave to computer respectively, click GET button, check whether the current host and slave access addresses are the same, if they are the same and not 0xE339E339, execute step 4, otherwise execute step 2

② Click CREATE button to create a random address

③ Click SET button to set the access address of host and slave respectively

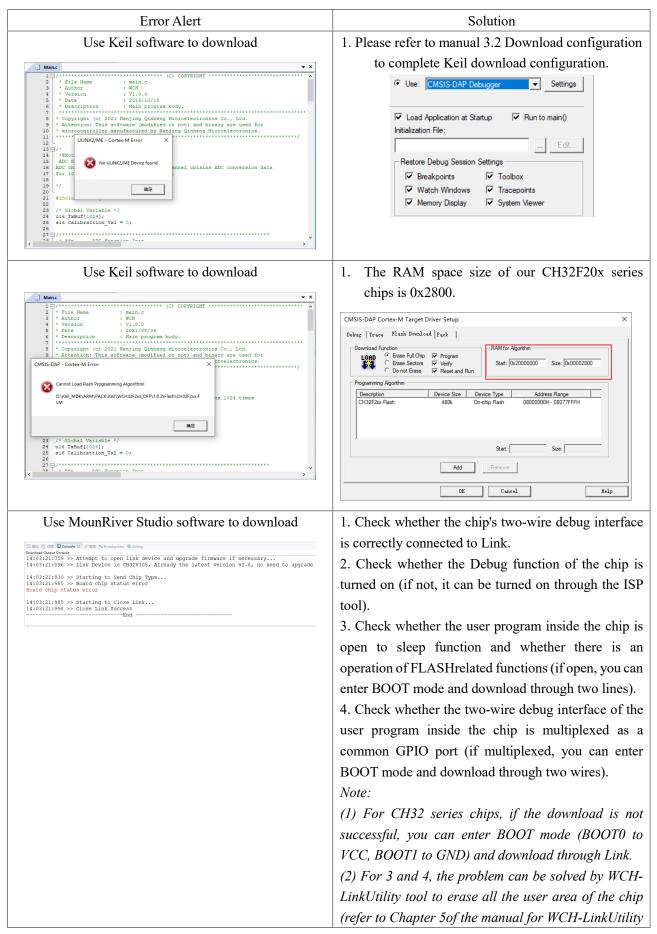

④ The slave connects to the MCU to power on first, then the host connects to the computer, and the green light will light up to use the wireless mode normally

Notes:

(1) The factory default WCH-LinkW wireless mode access address is 0xE339E339.

(2) When wireless mode, only one pair of WCH-LinkW wireless access address should be guaranteed to be the same in the same usage environment. If there are more than one pair of devices, you need to use the above steps to set different wireless mode access addresses.

9 Typical Problem Statement

	download).
Use the WCH-LinkUtility tool to download	Erase all user areas of the chip
Connected WCH-Link Node: RISC-V Link [#1] Refresh Active WCH-Link Node: WCH-LinkRV Get Set Operation Result: Set Set Idea 14:08:14:292>>> Begin to set chip type 14:08:14:354>> Faled,the chip type is not matched or status of chip is wrong!	File Target View Connect WCH-Link Disconnect ass: MC Query Chip Info Erase Chip F9 Program F10 OE Verify Reset F12 Query Chip R-Protect RST Disable Chip R-Protect Disable Chip R-Protect DA Disable Chip R-Protect Query Flash QE Image: Simple Chip R-Protect WF Enable Chip R-Protect WF Clear All Code Flash-By Pin NRST WF Clear All Code Flash-By Power off
Update firmware using WCHLinkEJtagUpdTool tool After updating the firmware according to manual 7.3 Mode Switching Download Procedure, the blue LED on the WCH-LinkE-R0-1v3 does not light up and the Device Manager cannot recognize the device.	1. Analysis of the cause, may be the WCH-LinkE-R0- 1v3 on the Y1 crystal soldering abnormalities, resulting in the crystal cannot properly start vibration. Therefore, you need to re-solder the Y1 crystal.
When using WCH-LinkW wireless mode for downloading and debugging, the green light does not turn on.	1. Please refer to section 8.2.2 of the manual for operation.
When using WCH-LinkW wireless mode for downloading and debugging, Code Flash full erase and power output controllable functions are not available. When using WCH-LinkW wireless mode for downloading and debugging, the slave cannot upgrade the firmware online.	 To use the above function, you need to connect to the slave USB port through the charging head or mobile power to power the slave and MCU. WCH-LinkW slave online firmware upgrade needs to be done in wired mode.

Notes:

(1) The debugging function is not supported when the user program turns on the sleep function.

(2) If you exit abnormally when using the debug function, it is recommended to re-plug the Link.

(3) When using the download and debug functions of CH32F103/CH32F203/CH32V103/CH32V203/

CH32V307, BOOT0 is grounded.

(4) When using the debug function of CH569, the user code must be smaller than the configured ROM space, as shown in Table 2-2 of CH569SD1.

(5) When using the debug function of CH32 series chip, please make sure the chip is in the read protection off state.

(6) Typical WCH-Link FAQs can be found at: <u>https://www.wch.cn/bbs/thread-100647-1.html</u>

10 Driver Installation

10.1 WCH-Link Driver

(1) The WCH-Link driver will be installed automatically when MounRiver Studio is installed, and the device manager will be shown in the table below after successful installation. If the driver installation fails, please open the LinkDrv folder under the installation path of MounRiver Studio and manually install SETUP.EXE under the WCHLink folder.

(2) To install the WCH-LinkUtility tool, you need to manually install the WCH-Link driver. Please open the Drv Link folder in the WCH-LinkUtility tool file directory and manually install WCHLinkDrv WHQL S.exe.

Device manager		Drive path

10.3 CDC Driver

CDC device installation problems under WIN7.

- ① If the serial port driver is successfully installed, the following steps are not required.
- ② Confirm that the usbser.sys file is present in path B. If it is missing, copy it from path A to path B.
- ③ Reinstall the CDC driver. (See the above table for the driver path, please install the CDC driver in the corresponding mode)
